

Central Components Announces AS9100 Certification

Tucson, Arizona

July 18, 2011

Central Components Inc is please to announce that they have recently achieved AS9100 Rev C certification in accordance with AS9104A. Central Components has chosen to partner with accreditation firm Management Certification of America to garner this approval. Central Components, who is already approved to ISO 9001:2008, is dedicated to the process of continuous improvement. These certifications demonstrate the presence of an aerospace quality system that is consistent and regimented toward the manufacture of high quality cnc machined components. Central Components is geared toward for continued growth in the aerospace sector, outside of their presence and success in many other stable and emerging markets.

About Central Components Inc.- Central Components was established under the direction of Dave and Flo Robles in 1993 and has morphed into one of the fastest growing female minority owned cnc machining businesses. They currently do business in many different industry sectors including aerospace, medical, industrial, military, photonics, and optical. With an emphasis in cnc contract machining, along with others areas like fabrication, injection molding, cnc contract mechanical inspection and general fabrication have led to the growth of Central Components in the Southwest US.
